

TOPIC: _____

A general starting point like "new technologies on mobility"

The Prediction Generator.

by Studio José de la O

Desires

Which topic or potential problem would I like to tackle?
Example: Self Driving Cars on Developing Countries.

Patterns

Where and when can I find similitudes?
Example: Low education of employees are one of the reasons of low productivity on government offices.

Limitations

What are the elements I cannot change? Where and when can I only adapt instead of generate?
What is the thing that we don't know?
Example: Corruption on governments diverts resources meant to spend on infrastructure.

Questions

Is there a co-relation between "Patterns" and "Limitations"?
Are there gaps on my similar cases? What could one do to "change" a pattern?
Example: How corruption can affect the use of Self Driving Cars on developing countries?

Similar Cases:

Where and when can I find similar problems?:
Example: Lack of infrastructure on postal services on Developing Countries limits the growth of e-commerce.

Hypothesis

Generate a prediction:
Example: Self-Driving Cars would only work on designated areas where infrastructure benefits the upper class.
